What to expect with marble

Will the product I receive be identical to the image shown ?

No, marble is a naturally formed material and due to this no two pieces will ever be identical. Marble is formed within the Earth's surface over millions of years. Colours, shades, hues, patterning, pitting, surface deviations and veining are all natural characteristics which vary with every piece so please consider this when looking at the representative images.

If I order two of the same item, can I expect them to be the same ?

No, as above bearing in mind marble is a natural product, no piece will ever be the same. Please also consider products can be cut from different blocks which would result in shade and colour variations.

If marble breaks or chips can it be repaired ?

With large cracks in the main body of the item which effect its durability, the only long term solution is to replace the marble. There are independent specialists who can restore marks and damages back to almost its original appearance, but if you have a variety with deep veining, the damage may not even be noticeable.

If I stain the marble can it be corrected ?

The only way to remove deep-set stains is to have the marble professionally re-ground and polished, however one of the advantages of the material is that this kind of work can be done in situ by an independent specialist.

How practical is marble ?

When used in a bathroom space, marble is easily maintained. Advances in sealant development now means manufacturers can offer long term guarantees against staining with the use of their product. Many sealant manufacturers recommend resealing your surfaces once a year. Our marble pieces arrive with you sealed, however to ensure longevity we would recommend investing in resealing as per the sealant manufacturer's guidance.

How should I care for my marble ?

Avoid using products that contain harming chemicals. Instead, use a mild diluted cleaner on a cloth (avoid spraying the marble piece directly), or use the product recommended by the installer. Acidic substances such as toothpastes and beauty products can be troublesome. If you happen to spill something that contains acid, make it your best effort to clean as soon as possible, or you may risk leaving deep stains and ring marks.

Decadent Brown Emperor is a natural pure honey hue marble, toasted with shades of almond and white veining. Quarried in Turkey the refined material is subject to particularly appealing variations.

Due to the natural formation of marble, difference in shades, veining, markings and texture are all elements to be welcomed as inherent individual characteristics. Marble benefits from each piece being delightfully unique.

Extraordinary organic aspects to enjoy are moments of crystallisation, diversity of hues and colour as it moves through the slab, fine flowing hairlines, pitted deviations and fissures amongst intensity of marbling. All authentic gains of individuality.
